

Unitree R1 Base

- Entry-level version
- 24 Degrees of Freedom
- Stereo camera and basic motion
- Not programmable (no developer support)

Unitree R1

The Unitree R1 is a humanoid robot that combines many movable joints with strong onboard computers to enable realistic walking, perception and interaction. It is available in several Base and EDU versions with different levels of programmability, AI computing power and robotic hands, so that schools, universities and companies can choose the right model for their needs.

Unitree R1 EDU U1

The R1 EDU U1 adds an artificial-intelligence computer of about **40 TOPS** per second so students can program and simulate their own experiments.

Unitree R1 EDU U2

The R1 EDU U2 offers **26 joints** with a moving head and around **100 TOPS** per second for more advanced AI and vision projects.

Unitree R1 EDU U3

The R1 EDU U3 adds two **Dex3-1 three-finger hands** without touch sensors for basic grasping research.

Unitree R1 EDU U6

The R1 EDU U6 upgrades to **BrainCo Revo 2 Touch five-finger hands with tactile sensors** for precise manipulation and human-robot interaction.

Unitree R1 EDU U5

The R1 EDU U5 has two **BrainCo Revo 2 Basic five-finger hands** for more human-like hand motion without touch sensing.

Unitree R1 EDU U4

The R1 EDU U4 uses the same three-finger hands but **with tactile sensors** to feel contact and pressure.

*Every version of the Unitree R1 includes the features of all previous versions and adds the additional highlighted upgrades.
